

Module Imports and Aliases

Let's first do a `require` in Elixir.

```
require Integer      # Equiv. of import Integer of Python
```

```
Integer.is_odd(3)
```

```
is_odd(3)           # CompileError
```

```
import Integer      # Equiv. of from Integer import *
```

```
is_odd(3)
```

There are a couple of other things but we will come to them when they are necessary.
